

EventSphere

System Requirements:

- Internet Connection
- Modern Web Browser (Google Chrome, Microsoft Edge, Firefox, Safari)
- Node.js (v18 or higher) and npm installed locally

1. Local Setup & Installation:

Follow these instructions to run EventSphere locally on your computer:

Option A: Installing via Git Clone:

1. Open your terminal/command prompt and clone the repository:
`git clone https://github.com/BhumikaSharma3112/EventSphere.git`
2. Navigate into the cloned directory:
`cd EventSphere`

Option B: Installing via ZIP File:

1. Download and extract the project ZIP archive using your native system extractor, WinRAR, or 7-Zip.
2. Open terminal/command prompt and navigate into the extracted root folder:
`cd EventSphere` (or your specific extracted folder name).

Installing Dependencies & Configuration (For Both Options):

1. **Install Frontend Dependencies:** Navigate to the Frontend folder and install:
`cd Frontend`
`npm install`
2. **Install Backend Dependencies:** Navigate to the Backend folder and install:
`cd ../Backend`
`npm install`
3. **Configure Environment Settings:** Create a file named `.env` inside the Backend folder. Add parameters like `PORT=5000` and `JWT_SECRET=your_jwt_secret_key`. (Leave the MongoDB connection URI blank to automatically trigger the database local mock fallback configuration for quick offline testing).

2. Starting The Application:

1. **Launch the Backend Server:** Navigate to the Backend folder and run:
npm run dev (runs backend on port 5000).
2. **Launch the Frontend Server:** Open a new terminal window, navigate to the Frontend folder, and run:
npm run dev (runs frontend on port 5173).
3. **Visit the App:** Open your browser to **http://localhost:5173**.
4. **Or visit the live deployed website:** **https://eventsphere-prestige.onrender.com/**.
 - o **NOTE:** If using the live Render link, the first database request may take **30–60 seconds** to load if the free tier hosting is sleeping.

3. How to Use:

Step 1: Browse Events

Open the website to view the luxury curations registry.

Step 2: Sign In / Access Roles

Click **Sign In** on the top right. Register a new account or log in with credentials. Select either the **Attendee** (guest) or **Organizer** (curator) role.

Step 3: Book Ticket (Attendee)

Browse listed events, click on an event card, choose your ticket quantity, and reserve your admission pass.

Step 4: View & Download Ticket (Attendee)

Navigate to **My Tickets** to view your active passes, scannable QR codes, and download invitation passes as premium PDFs.

Step 5: Curate Event (Organizer)

Go to the Organizer dashboard. Click **Curate Event** to list a brand-new curation, specify capacity limits, ticket pricing, and upload banner/gallery images.

Step 6: QR Scan & Attendee Check-In (Organizer)

On the Organizer panel, navigate to the **Attendees Registry** for your curated event. Click '**Simulate Camera Scan**' to automatically scan pending guest check-in QR codes, check them in with live timestamps, and trigger confetti.

4. Expected Output:

After successful bookings and actions, the application displays:

- Scannable QR Codes generated uniquely for each invitation pass.
- Clean, professional PDF files containing booking codes, event location, and entry guidelines.
- Dynamic analytics graphs on Admin/Organizer dashboards depicting total sales (■) and ticket distribution.

5. Error Handling:

If incorrect or incomplete information is entered:

- **Validation Alerts:** Mandatory fields like phone number are strictly checked (10 digits for Indian number selectors).
- **Price & Capacity Clamps:** Admission price cannot exceed ■10,00,000, and capacity is locked up to 100,000 to prevent layout breakage.
- If the database connection drops, the backend automatically falls back to an in-memory database configuration so that local testing continues uninterrupted.

6. Closing the Application:

- Click **Sign Out** from the top-right profile menu to safely close your session.
- Simply close the browser tab. User credentials are stored securely in local storage and HTTP cookies.
