

EventSphere

System Requirements:

- Internet Connection
- Modern Web Browser:
 - o Google Chrome
 - o Microsoft Edge
 - o Mozilla Firefox
 - o Apple Safari, etc.

1. Starting The Application:

- Open your preferred web browser.
- Visit the live website: **<https://eventsphere-prestige.onrender.com/>** (or **<http://localhost:5173>** for local development).
- Wait for the website to load.
 - o **NOTE:** Since the server may be hosted on Render's free tier, the first database/server request may take **30–60 seconds** if the server is sleeping. After that, it wakes up and works normally.

2. How to Use:

Step 1:

Open the EventSphere website to view premium curations.

Step 2:

Click **Sign In** on the top right. Register a new account or log in with your credentials. You can select either the **Attendee** (guest) or **Organizer** (curator) role.

Step 3:

For Attendees: Browse listed events (e.g. Wellness Retreats, Heritage Art), click on an event card, choose your ticket quantity, and reserve your complimentary or paid pass.

Step 4:

Go to the **My Tickets** portal (accessible via the profile dropdown or the dashboard sidebar) to view your active passes, view secure ticket QR codes, and download invitation passes as premium PDFs.

Step 5:

For Organizers: Go to the Organizer dashboard. Click **Curate Event** to list a brand-new curation, fill out the form fields (title, category, date, city, pricing, capacity), and upload your banner and gallery images.

Step 6:

On the Organizer panel, navigate to the **Attendees Registry** for your curated event. Click '**Simulate Camera Scan**' to automatically detect pending guest check-in QR codes, mark them as Admitted with live timestamps, and trigger celebratory confetti.

3. Expected Output:

After successful bookings and actions, the application displays:

- Scannable QR Codes generated uniquely for each invitation pass.
- Clean, professional PDF files containing booking codes, event location, and entry guidelines.
- Dynamic analytics graphs on Admin/Organizer dashboards depicting total sales (■) and ticket distribution.

4. Error Handling:

If incorrect or incomplete information is entered:

- **Validation Alerts:** Mandatory fields like phone number are strictly checked (10 digits for Indian number selectors).
- **Price & Capacity Clamps:** Admission price cannot exceed ■10,00,000, and capacity is locked up to 100,000 to prevent layout breakage.
- If the database connection drops, the backend automatically falls back to an in-memory database configuration so that local testing continues uninterrupted.

5. Closing the Application:

- Click **Sign Out** from the top-right profile menu to safely close your session.
- Simply close the browser tab. User credentials are stored securely in local storage and HTTP cookies.
